Screen selection for KDC Data sheet

Inner Screens

The inner screen separates the large impurities from the crop.

An inner screen with small holes compared to the kernel size gives the most efficient cleaning, but reduces the capacity.

An inner screen with large holes compared to the kernel size gives capacity, but reduces the cleaning efficiency.

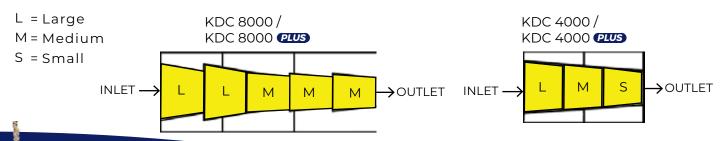

If too much crop is fed into the KDC, good kernels will be discharged together with the impurities.

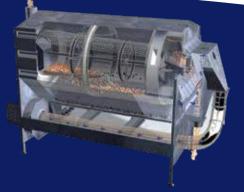

Max. capacity

Max. cleaning effect, reduced capacity

									capacity

Oblong holes 10 x 30 (all sections)									

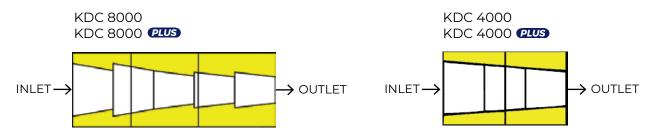

Outer Screens

On the outer screen, small impurities and small kernels are separated from the crop. For precleaning, there is no limitation in capacity in relation to choice of screens. For separation of kernels by size on the outer screen, app. 10-20% of the capacity rated for precleaning can be obtained.
